## Overview:

I have a background in applied mathematics which I plan to utilize as the foundation for a career in software engineering. Particularly, I want to play a role in creating the next generation of data driven web and mobile applications. Over the past year, I began cultivating the necessary skills to achieve this vision, both by expanding upon my python knowledge while working as a data analyst for TNR Technical, and by learning clojure and frontend development while volunteering for Code for Denver. I am prepared to show the same dedication and tenacity that I needed to earn my M.S. in mathematics as I continue to grow as a software developer.

## Skills:

### Web Development

- clojure
- luminus
- reagent
- html
- css
- git
- sassc
- algorithms and data structures
- bootstrap
- functional programming
- object oriented design

### Data Analysis

- python
- pandas
- sklearn
- pdb
- scrapy
- beautiful soup
- numpy
- matplotlib
- scipy
- statsmodels
- linear algebra
- statistics
- probability
- control theory
- machine learning
- time series analysis

## Experience:

	<b>Volunteer Web Developer</b>	<b>06/2018-Present</b>
<b>Code for Denver</b>	<ul style="list-style-type: none"><li>• Implemented reagent components for a luminus web app designed to connect Denver communities with wealth building resources.</li></ul>	

	<b>Data Analyst</b>	<b>03/2018-Present</b>
<b>TNR Technical</b>	<ul style="list-style-type: none"><li>• Built a Markov decision process model to compute optimal inventory restocking policies from sales data.</li><li>• Generated sales leads with web scraping techniques.</li></ul>	

	<b>Graduate Research Assistant</b>	<b>08/2014-12/2017</b>
<b>Colorado State University</b>	<ul style="list-style-type: none"><li>• Derived partial differential equations to model Ion Bombardment experiements.</li><li>• Implemented exponential time differencing methods in python to numerically simulate the solutions of these partial differential equations.</li><li>• Discovered a criterion experimentalists can check to help determine the dominant physical mechanism in ion bombardment experiments.</li><li>• Improved memory efficiency of the research group's code by a factor of 2 by utilizing real Fourier transforms.</li><li>• Tested and debugged research code using pdb.</li></ul>	

## Education:

	<b>M.S. Mathematics</b>	<b>08/2014-12/2017</b>
<b>Colorado State University</b>	<ul style="list-style-type: none"><li>• <b>Thesis:</b> On the Contribution of Phase Separation to Pattern Formation during Normal-Incidence Ion Bombardment of Binary Compounds</li><li>• <b>Research Advisors:</b> Profs. Patrick Shipman and R. Mark Bradley</li><li>• <b>Focus:</b> Partial Differential Equations, Numerical Analysis, Materials Science</li><li>• <b>Departmental Involvement:</b><ul style="list-style-type: none"><li>◦ Webmaster for CSU's student chapter of SIAM, Fall 2017.</li><li>◦ Organized the department's graduate student seminar, Fall 2017.</li></ul></li></ul>	

	<b>B.A. Mathematics</b>	<b>08/2010-05/2014</b>
<b>Gettysburg College</b>	<ul style="list-style-type: none"><li>• Graduated Summa Cum Laude</li><li>• GPA: 4.00</li><li>• Earned Earl E. Ziegler Award and Charles Baum Prize for academic excellence in mathematics.</li></ul>
